EXPERIENCE

Founder/Chief Hacker

Heretek Ltd. / 2023 - Present

As a Cyber Security Specialist I have supported many clients on a short-term contractual basis to deliver risk reduction, capability growth and to deliver technical expertise. Such as;

Luminor Bank - Cyber Security Operations Specialist to support their Cyber Uplift programme. I provided a gap analysis of their SOC, delivered a SIEM migration, implemented automated penetration testing, delivered a Cloud assessment solution, led penetration testing and Red Teaming, specialist for the DORA readiness project.

HR Agency (Asked to be kept anonymous) - Had developed an internal agentic AI chat bot to deliver policy and guidance in-house. My testing led to a complete compromise after weaponising it to siphon internal user credentials to my testing device.

Klarna - Supported as a Lead Security Engineer to better improve their cloud security and posture.

RootShell - Penetration testing company contracted me to deliver Web Application, OSINT and API penetration testing.

Mastercard - Provided vital support as a Lead Offensive Security Engineer to improve their security posture.

Admiral - Delivered Penetration testing as an AI subject matter expert as well as define their internal testing methodology.

The Adecco Group - I delivered multiple engagements across internal AI developed tools and systems. Some of which were customer facing and I highlighted critical issues that could have been detrimental to their customer data and brand if released.

**IF YOU ONLY
DO WHAT
YOU CAN DO,
YOU'LL NEVER
BE MORE
THAN WHAT
YOU ARE
NOW.**

Master Shifu, Kung Fu
Panda 3, 2016

I thrive on continuous self-improvement in cybersecurity. I've had the privilege of collaborating with exceptional individuals in the field recently on developing new tools and methodologies for testing AI applications and LLMs. The key lesson for me is the importance of keeping cybersecurity engaging. To foster this, I challenge myself regularly, presenting at conferences like B-sides, Defcon:4420, BEAcon, and CRESTcon. I am committed to constant learning, recently building bespoke and unique uses for the Microsoft RedTeam AI testing tool (PyRIT) and I'm experienced in scripting languages like Python, Bash, and Powershell for automation.

My engagement extends to sharing knowledge with others and participating in platforms like ImmersiveLabs, HackTheBox, SANS KringleCon to unwind and sharpen my skills.

Head of Offensive Security

The Workshop / Feb 2022 -July 2023

Led the establishment of a new Offensive Security function, overseeing a team of five with diverse skills in penetration testing, red teaming, and OSINT analysis. Developed strategies, roadmaps, policies, standards, and processes with guidance material. Integrated service delivery with the wider organization, designed solutions, and created a commercial offering, encompassing Vulnerability Assessments, Infra and Web App Pentesting, Password auditing, config/hardening review, and consultancy services. Mentored four penetration testers and conducted weekly training sessions using platforms like HackTheBox. Personally delivered Infrastructure and Web App tests, driving significant technological changes and improvements. Recognized as Mentor of the Year for guiding junior testers in their first steps within Offensive Security.

Director/Cyber Security Specialist

Ridill Ltd / 2019-2022

As a cyber security consultant I have taken on bespoke roles that fill a clients need when they are looking for a skilled cyber SME.

(Apr 21- Feb 22) I was contracted as a **Principal Security Analyst** for **NHS Digital**. It was my responsibility to manage a team of incident responders that cover all data, applications, and environments for the country's COVID 19 response. Other duties include Threat Hunting, leading Purple Team activities to develop SIEM and EDR detections in line with current threat profiles, security team development and training.

(May 20-Apr 21) In the **Ministry of Justice** I was contracted as a **Red Team Operator**. My responsibilities were to design and execute simulated attacks across a range of networks and applications. The areas I covered were Active Directory, web applications, databases, networks and cloud (Azure and AWS) infrastructure testing. I've designed and delivered multiple engagements from inception to reporting and helped with remediation testing to verify the improvement of the client's security posture. My responsibilities also included reporting to senior leadership as well as key suppliers. To support Purple team efforts I've also worked closely with the MOJ SOC and designed training engagements to develop their capabilities

(Nov 19-May 20) In the **Ministry of Defence** I was contracted as a **Cyber Security Specialist**. I was tasked with improving their Security Operations Centre and develop protective monitoring use cases. My primary responsibility was the creation and implementation of security use cases within their SIEM platform and was a key member in maintaining and upgrading that system. During my time there I developed a technical roadmap, training pathways and technology/tooling improvement for the SOC. I also initiated a testing methodology to validate my use cases and other security controls above and beyond what was currently in place. My time with this client has allowed me to drive incident response, security testing and protective monitoring over a range of classified networks.

Security Operations Manager

Parliamentary Digital Service / 2018-2019

Managed a team of 6 analysts, delivered training and development for technical specialists, key technical mentor by conducting weekly training sessions over a range of technical and cyber topics, Cyber SME for technology, modernised Security Operations, planned and launched security awareness campaigns, spearheaded the internal penetration testing service, matured Vulnerability Management programme, redesigned SOC automation, coordinated and implemented cloud monitoring and hardening within Azure tenancies, conducted gap analysis of strategic alignment to current capabilities, authored strategy, policy and technical standards, provided advisory services to government committees and Ministers.

Incident Management Lead

Parliamentary Digital Service / 2017-2018

Led a comprehensive redesign of incident management processes, implementing scenario-based testing and skills development. Expanded the Protective Monitoring SIEM's scope, refined use cases for cloud environments like Azure, and achieved quick operational wins. Modernized malware analysis and forensic services. Served as a technical mentor for the Incident Response team, managing incidents of all severities, including coordination with media and intelligence services. Provided quality assurance for junior analysts' tickets and daily operations. Specialized in international Incident Response efforts across the 5-Eyes. Supported joint efforts in US military cyber training exercises and contributed to the RAF's role in NATO cyber wargames. Conducted internal penetration testing upon request.

Security Operations Manager - Cyber Intelligence Centre

Deloitte LLP / 2016-2017

- Directed Vulnerability Management as a Service, leading a team in creating and deploying internal training programs, policies, standards, playbooks, and operations manuals.
- Played a pivotal role in testing and deploying Vulnerability Scanning tools such as Qualys, Nessus, and OpenVAS.
- Developed business strategies, roadmaps, and proposals for potential clients, serving as the Vulnerability Management Subject Matter Expert.
- Launched a Malware Analysis service in collaboration with the Incident Response team, reducing incident response times through the use of reverse engineering tools and techniques.
- Tested and deployed technologies including REMnux, Cuckoo, Fireeye, and Wildfire, while designing service integration feeds and training for junior SOC analysts.
- Managed and deployed service documentation, processes, financial forecasting, and service roadmaps for the Malware Analysis service.
- Enhanced Penetration Testing skills through internal training, obtaining CPSP and studying for OSCP.
- Built and maintained training environments, delivered client presentations on security topics, and conducted 'hacking' demos to showcase Deloitte's capabilities for prospective clients.

Senior Consultant - Cyber Intelligence Centre

Deloitte LLP / 2016-2016

I managed the following areas:

- Managed international Data Loss Prevention efforts, including vulnerability detection, network discovery, and coordination of patch management and remediation.
- Oversaw SIEM analysis, secure log monitoring, alerting, and investigation services, with expertise in SIEM integration.
- Led Threat Intelligence initiatives, conducting targeted reconnaissance and information gathering through OSINT, private tools, and dark web scanning.
- Conducted comprehensive Malware Analysis (static and dynamic), producing client-facing reports and implementing controls in high-severity incidents.
- Successfully reverse-engineered malware from families such as Dridex, Locky, Zeus, and Poison Ivy for clients.

Information Security Specialist - Technical Assurance

Royal Mail Group Technology / 2012-2015

My primary focus was on perimeter and infrastructure security across a national network. I provided advisory services for projects, programmes and initiatives across the business and worked closely with third parties who managed infrastructure, hosting and security services.

Achievements:

- Spearheaded a comprehensive overhaul of the firewall change control process, establishing a successful firewall assurance program.
- Led the design and implementation of impactful reporting dashboards in Splunk for the Security Operations Centre.
- Identified and successfully implemented a Firewall Management Platform, enhancing overall network security.
- Managed critical initiatives, including email security enhancements, Network Access Control (NAC) solution proof of concept, and engineering audits for SCADA systems.
- Established a private test network for internal proof of concepts in various security technologies.
- Contributed significantly to meeting PCI DSS standards through the creation and enhancement of firewall configurations.
