

Total eligible project cost: GBP 297,600

Safetech Global is not VAT registered, so no VAT applies. All costs are at fair market value and contain no profit. Figures match the finance summary.

Table 1. Labour (GBP 289,200)

Role (named person)	Rate (GBP/day)	Days	Cost (GBP)	% of total
Senior Software Engineer and Technical Lead (Fatma Erturk, founder)	388	232	90,000	30.2%
Senior AI and ML Engineer (Dr. Amudha Kumari Duraisamy, Physics PhD)	1,140	80	91,200	30.6%
Senior Cyber Security Expert (Jon Medvenics, ChCSP)	600	116	69,600	23.4%
Cyber Security Advisor (Alan Jenkins)	800	48	38,400	12.9%
Labour subtotal (476 days)			289,200	97.2%

Table 2. Non labour

Cost line	Cost (GBP)	% of total
Materials: field hardware, Cisco compatible appliance, and a GPU workstation for AI model training and calibration	8,400	2.8%
Overheads	0	0%
Capital usage	0	0%
Subcontractors	0	0%
TOTAL ELIGIBLE PROJECT COST (no VAT)	297,600	100%

Payment schedule by milestone (matches the finance summary)

Month	Milestone deliverable	Payment (GBP)	% of cost
M3	M1 Foundation: both modes deployed and tuned in the operator environment; signed test plan.	74,400	25%
M6	M2 AI models and analytics: new AI detection models trained on real and decoy data; SIEM and SOAR integration.	74,400	25%
M9	M3 Operate and assure: AI validated and calibrated; success metrics captured; independent security review.	74,400	25%
M12	M4 Qualify and handover: TRL 8 qualification, operator acceptance, commercialisation plan, case study and handover.	74,400	25%
Total (paid monthly in arrears on invoice)		297,600	100%

Value for money for the team and the taxpayer

- * Public money funds only the new capability. The existing OTShield platform (decoy fabric, protocol dissectors, asset platform, research workbench and live threat intelligence feed) is brought at no charge, so funding goes to the new AI based threat detection layer, the energy deployment and the operational proof.
- * Over 50% of the cost is R&D, principally the development and training of the new AI detection models.
- * Lean, senior team: a Physics PhD AI lead, a chartered cyber expert, a NATO Locked Shields engineer and a former defence CISO, sized to the work with no padding. The founder works at a heavily reduced rate, a substantial in kind discount.
- * No profit, no VAT, and no closed source licence cost (open source components, Apache 2.0 and MIT).
- * Transferable outcome: a proven, operator accepted capability that strengthens UK energy resilience and transfers directly to water, transport and defence, so one funded deployment seeds wider adoption.

In one line

GBP 297,600, no profit and no VAT, buys a new AI detection capability and an operator accepted, sector ready product. The budget is realistic, justified and appropriate for the aims and methods.
