

## Sales pipeline by engagement stage

OTShield is pre revenue with an active pipeline of UK and EU critical infrastructure prospects. Prospect identities are anonymised here for commercial confidentiality. The pipeline is managed in five engagement stages, each with a defined likelihood of converting to a paid beta / pilot test site. This Innovate UK project provides the funded, operator accepted reference deployment that converts engaged prospects into beta sites.

Table 1. Engagement stages and beta site likelihood

| Stage        | Definition (entry criteria)                                                                            | Beta site likelihood | Stage colour |
|--------------|--------------------------------------------------------------------------------------------------------|----------------------|--------------|
| 1. Awareness | Prospect identified and aware of OTShield (inbound, event, accelerator network). No qualification yet. | 5 to 10%             | see funnel   |
| 2. Qualified | Need, OT environment, budget owner and NIS/CAF driver confirmed; OTShield shortlisted.                 | 15 to 25%            | see funnel   |
| 3. Engaged   | Active technical dialogue; demo delivered; decoy/AI detection scope discussed with their SOC.          | 30 to 45%            | see funnel   |
| 4. Beta LOI  | Letter of intent / engagement to host a paid beta or pilot, subject to deployment terms.               | 60 to 75%            | see funnel   |
| 5. Beta site | Signed beta / pilot deployment in the prospect's live OT environment.                                  | 100% (won)           | see funnel   |

Figure 1. Pipeline funnel (anonymised prospect counts)

## Anonymised pipeline and weighted value

Each prospect is shown by segment only. Weighted value = annual tier value x beta site likelihood (mid point). Tier values are OTShield's published prices (Starter GBP 20k, Growth GBP 50k, Advanced GBP 75k per year).

| Prospect (anonymised)                                    | Segment              | Stage     | Target tier           | Likelihood | Weighted value |
|----------------------------------------------------------|----------------------|-----------|-----------------------|------------|----------------|
| Energy prospect A                                        | UK electricity DNO   | Beta LOI  | Advanced (GBP 75,000) | 68%        | GBP 51,000     |
| Energy prospect B                                        | UK gas / downstream  | Engaged   | Growth (GBP 50,000)   | 38%        | GBP 19,000     |
| Energy prospect C                                        | UK generation        | Qualified | Advanced (GBP 75,000) | 20%        | GBP 15,000     |
| Energy prospect D                                        | EU transmission      | Engaged   | Growth (GBP 50,000)   | 38%        | GBP 19,000     |
| Water prospect E                                         | UK water utility     | Qualified | Growth (GBP 50,000)   | 20%        | GBP 10,000     |
| Defence prospect F                                       | Defence supply chain | Awareness | Advanced (GBP 75,000) | 8%         | GBP 6,000      |
| Transport prospect G                                     | UK transport CNI     | Awareness | Starter (GBP 20,000)  | 8%         | GBP 1,600      |
| Total weighted pipeline (annual recurring, illustrative) |                      |           |                       |            | GBP 121,600    |

### How this project moves the pipeline

- The Innovate UK project funds an operator accepted reference deployment, which is the strongest possible proof point for converting Engaged and Beta LOI prospects into signed beta sites.
- Energy prospect A (Beta LOI, ~68%) is the lead candidate to host the project's operational demonstration, subject to engagement letter terms provided with the application.
- Each converted beta site becomes a case study that raises the likelihood of the next prospects in the same segment, compounding conversion across the energy sector and into water, transport and defence.
- Pipeline is reviewed monthly; likelihoods are stage mid points and are updated as prospects progress. Figures are illustrative and commercially confidential.
